

**TITLE:****EVALUATION OF ETIOLOGICAL FACTORS FOR ESTHETIC COMPLICATIONS  
IN IMPLANTOLOGY****ABSTRACT**

Esthetic and Patient Satisfaction should be the clinician's main concerns in implant dentistry and its very important to be able to achieve long term stable outcome. In esthetic zone.

There are multiple factors that can affect the treatment outcome and its very crucial to evaluate them prior to surgery and have a precise treatment protocol for the patient.

In this presentation ideal three-dimensional implant positioning, soft tissue thickness and biological width preparation, emergence profile of the restoration, protocols for achieving optimum primary stability and many more criteria will be discussed.
